Modernization of Higher Education  
in Central Asia  
through New Technologies  
(HiEdTec)

### THE SUSTAINABLE ACADEMIC NETWORK

This Academic network for sharing experience and exchange of good practices is the first experience of coordination and sharing between Uzbekistan universities committed to the topic of innovative educational technologies and didactic models. As there are lots of efforts to make education more interactive and engaging, but never these aims and activities were joined into single network where the skills and experience are widely shared and accessible.

#### Goal

The main goal of the Sustainable Academic Network is to spread the innovative educational technologies and didactic models, both within and outside the Universities in the project, sharing skills and experiences, with the aim of increasing the positive impact in terms of innovation, digitalization, organization of creative teaching actions which are currently implemented by each university, furthering the recognisability and the value of the HiEdTec experience on a national level.

Furthermore, the Sustainable Academic Network is working to incentivize the collaboration among universities to spread teaching and learning innovation over the regions of Uzbekistan. Lastly, the network seeks to provide cultural stimuli for the entire country system and to promote new innovative educational technologies and didactic models for better education and teaching, which support the debate between its stakeholders and companies in need for quality graduates.

#### Activities and implementation

The Sustainable academic network for sharing experience and exchange of good practices in the field of IET&DMs will be open for students, professors and everyone who wants to join. Such academic network opens up further opportunities for both Central Asian and EU partner countries' higher educational institutions. Also, the network will serve as a platform for future collaborative work and developing educators' competences through active exchange of know-how in the field of digital pedagogies and didactic models and so on. The network's aim is to comprise of project PC universities. After official project end, an access for the resources will be given to other HEIs in the PCs. To continue activities after the official project end, thus contributing to project impact and sustainability improvement.
